

FILE CHECK

FILE

Please send your files in PDF format.

COLOUR

Enclose CMYK & ICC profiles.

Please keep in mind that PMS colours that are printed in CMYK can look very different from the PMS colour you had in mind.

The colours that you see on the screen can also be different from the colours in print.

You can set the CMYK colours by following the steps in these programs:

Adobe InDesign: *Edit > Transparency Blend Space > Document CMYK*
Adobe Illustrator: *File > Document Color Mode > CMYK Color*
Adobe Photoshop: *Image > Mode > CMYK Color*

DPI

True size: minimum 200 dpi, change resolution during scaling

Please add a clear notification if the file is scaled.

BLEED

Minimum 5 mm overlap on every side

FONT

Please set all text in embed fonts so the fonts can't move.

Please send the font along with the file.

SIZE

It is best if you deliver the file in true size (100%) with 5 mm overlap on every side.

TRANSPARENCY

If you work with Photoshop, InDesign or Illustrator, please smooth out all your transparencies.

CUTTING CONTOUR

Do you wish for a specific shape rather than simply a rectangular form? In that case, create a supporting colour “Cut” for the contour. If you also desire other operations (V-cut, folding lines, kiss-cut, ...) you can indicate this through the use of supporting colours and by naming the supporting colour as required. See a list of supporting colours on page 3.

IMAGES

Please embed all files in the document or send the hyperlinks separately.

Preferably save logo's etcetera as a vectorial file.

OVERPRINT

PLEASE DISABLE OVERPRINT

Attention! 3Motion is not responsible for wrong overprint settings. Please create your files without overprint.

This is dangerous in the case of overlapping colours and/or black colours from InDesign. Please pay close attention to the follow items:

- Check the pdf file before you upload it to our server through the *Overprint Preview* and the *Separation Preview* in Adobe Acrobat 6 or the *Overprint Preview* in Acrobat Reader 7 (free).

Overprint Preview

- Check your pdf file with a print, enable *Overprint Preview*
- For offset printing, the pdf file must always be saved as pdf-version 1.3 (and as such be compatible with Acrobat 4.0). Furthermore the file must be compatible with the ISO PDF/X-3:2002-standard.
- For digital printing, the pdf file must always be saved as pdf-version 1.4 (and as such be compatible with Acrobat 5).

SPELLING AND LANGUAGE ERRORS

Attention! 3Motion does not specifically check the files for language and spelling errors. Please review your sample print closely before confirming.

DELIVERED FILES

	Reason	Program
.pdf	High resolution	Photoshop, Illustrator, InDesign, Acrobat
.psd	High resolution	Adobe Photoshop
.ai / .eps		Adobe Illustrator
.tiff	High resolution	
.doc(x)	After consultation	Microsoft Word
.ppt(x)	After consultation	Microsoft PowerPoint
.xls(x)	After consultation	Microsoft Excel
.pub	We cannot open this file	Microsoft Publisher
.indd	Causes problems unless all links / fonts are sent together with the file. (Create packet.)	Adobe InDesign
.eps	With clipping mask, ...	Adobe Photoshop
.jpg	Only for picture products
